5

A) Executive summary

B) project description

C) project scope

→ 10 A) Executive Summary

- Analysis :-

The farmer is facing lot's of problem's like lack of labour, medicin's & other necesssary equipment's which are required for his farm. And also he want to manage his financial budget which he is spending more on labours & other things. which make's a big loss to him & minimal profit.

20

- findings :-

We have to make software which can manage their most of work like finding good labour's & available medicin's near to him & give a proper financial guidance which will control their budget in proper manner

B) project description :-

There is a farmer who is facing lot of problem's to manage his feild / farm. because lack of problem's labour's & medicin's. he is not able to

manage his financial expenses. he needs a proper guidance to manage his farm correctly with maximum profit & minimum investment for this all we need to provide him a software which can give him proper guidance about all requirement's.

### c) Project scope :-

we can make a application in which the our software will take some input like measurement's of the farm & the type of crop. by providing this data our software will provide them accurate labour & how much quantity they need also it will guide them in financial planning like how much they should spend on seed, labours, medicine's & other equipments. by using this software based application they can make maximum profit in minimum investment.
